

Dermillume

Incredible LED Light Therapy for the Entire Body

Body Sculpting and Facial Procedures Done Simultaneously

No Pain No Pockets Left in the Skin
No Per Patient Fees No Costly Disposables
No Continuous Supervision
No Six Figure Price Tag!

The Dermalume Body System provides a comfortable, smooth and effective way to lose inches at your full abdomen and sides, thighs, or buttocks leaving your client slimmer and refreshed!

CoolSculpt and SculpSure customers pay as much as \$100,000 in patient fees (per year) that are used to market the devices and now everyone has a system right around the corner and is competing against each other. This is driving treatment revenues down!

SculpSure is very painful and leaves noticeable pockets in the skin causing some clients to stop the treatments.

CoolSculpt has the benefit of destroying the fat cells and since the lipids are cold they have trouble getting absorbed into the system. Results are not fully noticed for 4 to 6 months.

Dermillume uses 570 Watts of red and near infra-red light to heat the fat cells to over 107F causing Lipolysis. The Dermillume system covers the entire area without hot spots and provides a smooth uniform reduction in size. Stomach and sides are treated simultaneously.

Clients describe the treatment as soothing and when they see the results in the mirror and the fat in the toilet in two weeks, they can't wait to come back for more!

Your talent sets you apart from the others. It is time your equipment does too!
